

*Down To The Earth, From Sky Above* is a critical account in English translation on Baburao Bagul's select Marathi works in prose and verse. It deals with the texts selected with special reference to the theme of Cosmic Humanitarianism. Crucial aspect of the book is that it concerns with scientific ramifications of a literary text. The writer has brought the two different spheres in human endeavour together or rather on one single platform namely: 1. scientists working with NASA institution have written clear and pointed statements on co-relation between humans and spatial elements and possibility of extra-terrestrial life, and 2. cosmic humanitarian base in intuitive expression in literary forms of prose and verse. In the present context, it is the literary expression of select prose and verse in a regional language Marathi: Baburao Bagul's *Apurva* and *Veda Adhi Tu Hotas* respectively. Also this book is treating Dalit writings in Marathi from a different angle i. e. expanding canvas of Dalit writing and taking it on the cosmic humanitarian scale.
